# AVK YOUR LONG-TERM PARTNER

AVK has been in the valve business for more than 50 years. Today AVK is a global leader within valves, hydrants and accessories for water supply, gas supply, wastewater treatment and fire protection.

#### **The wide AVK range**

AVK International A/S specialise in manufacturing gate valves, double eccentric butterfly valves, ball check valves, service connection valves, Supa Maxi™ couplings, extension spindles and selected types of hydrants and accessories.

We add numerous products to our range from the more than 20 other AVK factories in Europe as well as from AVK factories worldwide. These AVK factories specialise in other types of valves, hydrants and accessories, and jointly we are capable of offering a very wide selection of high quality products.

#### **Global leadership and local commitment**

Our geographical presence and product range is global, but our focus is local. Our customers are serviced by local sales organisations, in AVK's own sales companies or within our carefully selected distributors, who engage in their customers' needs. We are therefore able to offer tailor-made solutions that match local specifications.

#### **A beneficial partnership**

We want to build and invest in a longterm partnership with our customers. To earn our role as a long-term partner, we strive to deliver value for money. We deliver error-free, durable and maintenance-free products that constitute the most cost-efficient solution for our partners in the long run.

# EXPECT QUALITY IN EVERY STEP

## State-of-the-art rubber technology

It is crucial that the rubber components inside valves, hydrants and accessories are of the highest quality to ensure a safe, watertight seal and trouble-free operation, even after many years without use. In our rubber factory, AVK GUMMI A/S, we develop and produce our own rubber components to make sure that they meet our uncompromising standards of excellence.

Our gate valve wedge design and other market-leading innovations provide the reliability you need to safeguard your network, your supply and the health and safety of your customers. This is especially important within water supply to avoid contamination and within gas supply to avoid even the tiniest leakage. AVK is the safe choice since we give high priority to quality and compliance.

For over 40 years, AVK GUMMI has made rubber components for the water, natural gas, healthcare and food industries. Our complete production control and one of the world's most advanced mixing plants enable us to offer rubber compounds of exceptional quality and uniformity, which are approved worldwide for drinking water, gas and many other applications.

## Streamlined processes facilitate short lead times

In our factories, all our products undergo careful surface treatment and rigorous testing to ensure durability and to make certain they can withstand even the harshest environments. We are in full control of the supply chain from raw materials to finished product with meticulous attention to quality control, traceability and pressure testing of every single valve.

Based on LEAN principles, we have streamlined our work processes and flow of goods to ensure the fastest possible lead time. We store a large selection of AVK's product range in our 13,000 m<sup>2</sup> warehouse fitted with AGVs for automated internal transport, and our warehouse management system enables us to optimise our inventory and handling. Altogether, this allows us to offer great delivery service.

# EXPECT US TO TAKE RESPONSIBILITY

## Water is a scarce resource

Access to clean water is often taken for granted, just like the fresh air we breathe. But we are facing an invisible, yet crucial problem of water loss, also referred to as non-revenue water. Non-revenue water is water that has been produced and cleaned but which is lost somewhere in the water distribution system without being used or paid for. The levels of non-revenue water range from about 5% to as much as 80% in certain areas.

AVK offers a wide range of reliable and long-lasting valves ensuring tightness many years after the valves have been installed, no matter if they have been used frequently or not at all. Our control valves contribute to efficient water supply management by maintaining a certain pressure, flow or level, regardless of changes in the supply network. Our digital monitoring solutions make it possible to save resources, reduce water loss and optimise network

activities. Our air valves and check valves contribute to extending the life span of the water network by reducing pipe stress. And in case of pipe leakages, we offer a wide range of collars and clamps for efficient pipe repair.

## Focus on sustainability

Our products are parts of vital infrastructure including water supply, wastewater treatment and energy supply that all together contribute to sustainable development, the health of people and a better environment. By delivering high-quality and long-lasting solutions we minimise environmental impacts caused by excavation, repair or replacement.

We have initiated the process of mapping, tracking and measuring the CO<sub>2</sub> emissions in our operations and per product. Minimum energy consumption is a core criterion of our design and production process and of our investments, and we have implemented the

ISO 50001 standard for Energy Management and the ISO 14001 standard for Environment Management. In addition, AVK suppliers must comply with our ethical standards to be a certified supplier of the AVK Group.

## Supporting world-transforming goals

Our solutions contribute to the UN sustainable development goals by ensuring clean water and sanitation, by reducing water loss, electricity consumption and CO<sub>2</sub> emissions, and by turning wastewater into affordable and clean energy. AVK has entered into partnerships with other leading Danish companies with the purpose of sharing knowledge within water technology and offering joint solutions for a more sustainable world.

# EXPECT LASTING INNOVATIONS

## **Inhouse R&D**

In our Development Department in Denmark, ideas and suggestions for new products are gathered, and existing products are updated continuously.

We use FEA (Finite Element Analysis) to optimise the strength and geometry of our components and CFD (Computational Fluid Dynamics) analyses to validate different product designs prior to creating physical prototypes. This enables us to predict consequences in cases where it is impossible to create full scale tests on physical products.

We make our own test and production equipment, and in our flow lab, we conduct thorough prototype and life cycle tests prior to release for production. New product types are generally field tested in co-operation with end users before final launch.

## **Quality certifications**

AVK's quality management system is certified according to ISO 9001 and the ISO 29001 standard for the oil and gas industry. Moreover, we are certified to the ISO 14001 standard for environmental management, the ISO 50001 standard for Energy Management, and the ISO 45001 standard for occupational health and safety.

# EXPECT US TO EXCEED MARKET STANDARDS

## Third party certification

Authorities such as DVGW (Germany), KIWA (Netherlands) and UL & FM (the US) offer certification of finished valves, and these are also recognized and accepted by other countries that do not have their own certification schemes.

By obtaining and maintaining the most widely accepted certification, we show our customers that AVK valves always meet the highest quality and safety standards.

## Expect... AVK

In our business there are five cornerstones that must be in place in order to meet customer expectations: Quality, reliability, innovation, sustainability and customer service.

But we need to go further than that. We go further to exceed our customers' needs and expectations.

"Expect... AVK" means that our customers should rightfully expect us to exceed market standards. "Expect... AVK" means that we relentlessly strive for increased customer benefits!

To ensure that we keep pushing the boundaries of what the market can expect, we have formulated promises that we will strive to deliver in all our markets:

- EXPECT** A LONG-TERM PARTNERSHIP
- EXPECT** QUALITY IN EVERY STEP
- EXPECT** LASTING INNOVATIONS
- EXPECT** TOTAL SAVINGS
- EXPECT** SOLUTIONS, NOT JUST PRODUCTS
- EXPECT** GLOBAL LEADERSHIP AND LOCAL COMMITMENT
- EXPECT** PROMPT RESPONSE
- EXPECT** IT TO BE EFFECTIVE AND EASY
